Dive Profile			
The diagram illustrates a dive profile with three segments. Each segment shows a descent, a bottom time (BT) period, and an ascent with a safety stop. Key markers include RNT (Residual Nitrogen Time), ABT (Adjusted Bottom Time), and TBT (Total Bottom Time). The profile is plotted against depth and time, with safety stops indicated by horizontal lines at specific depths.

Dive Profile	
The diagram shows three dive profiles. Each profile has a depth axis on the left and a time axis at the bottom. The first profile is a simple descent and ascent. The second and third profiles include safety stops (marked 'min:'). Above each profile are markers for PG, SI, and FG. Below the time axis are markers for RNT, +ABT, and TBT.	NDL: RBT:

Dive Profile	
The diagram shows three example dive profiles. Each profile starts with a descent (DEPTD), followed by a bottom time (BOTD) segment, and ends with an ascent (ASD). Safety stops are indicated by horizontal lines. RNT (Residual Nitrogen Time) is marked at the end of the ascent, along with ABT (Adjusted Bottom Time) and TBT (Total Bottom Time).	NDL: RBt:
